

PayoutBridge

“Your bank feed has been lying about your turnover.”

A Xero-native agent for marketplace settlement statements

THE PROBLEM

£1,340 earned. Xero saw £847.

£1,340.00

Gross sales customers paid

–£493.00

Commission £445.90 + fees
£47.10, deducted before
payout

£847.00

The single line the bank feed
records as “revenue”

37% of turnover invisible · commission expense missing · VAT trail wrong
from day one

Today's fix: a bookkeeper reverse-engineers every statement by hand.

CSV in. Correct books out.

A human approves every write.

Parse

Deterministic parser.
No LLM near your
money.

Propose

3-write gross-up plan,
in plain English.

Approve

Nothing posts until you
click Approve.

Verify

Clearing account read
back from Xero: £0.00.

$$1,340.00 - 445.90 - 47.10 - 0.00 = 847.00$$

The invariant. If a statement doesn't balance, the planner refuses to propose.

LIVE DEMO — THE GOLDEN PATH

Upload → Approve → 3 writes → £0.00

1	create-invoice	+£1,340.00	Gross revenue into Platform Clearing
2	create-bank-transaction	-£493.00	Commission + fees out of Clearing
3	create-payment	-£847.00	Clears against the bank deposit
✓	verification read	£0.00	Platform Clearing balance — live from Xero

PayoutBridge — Golden Path

MarketplaceCo settlement CSV → 3 Xero writes → zero-balance verify

USER	FRONTEND — React / Vite	BACKEND — FastAPI	XERO — via MCP server
Uploads CSV reviews proposal	1 Upload & Review screen calls <code>POST /propose</code> parser.py → planner.py builds 3-write plan	main.py — propose handler invariant check: gross-comm-fees-refunds==net triggers → <code>create-invoice</code>	create-invoice +£1,340.00 gross revenue posted into Platform Clearing
Clicks Approve	2 Approval Drawer calls <code>POST /approve</code> (executes remaining writes in order)	main.py — approve handler step 2 of plan → <code>create-bank-transaction</code>	create-bank-transaction -£445.90 commission -£47.10 fees out of Platform Clearing
(same approval)	3 Approval Drawer same <code>POST /approve</code> call idempotency.py tracks per-step state	main.py — approve handler step 3 of plan → <code>create-payment</code>	create-payment -£847.00 clears against the bank deposit
sees ✓ Verified badge	✓ StepProgress / Reconciliation polls <code>GET /status/{hash}</code> renders zero-balance confirmation	xero_client.py <code>get_clearing_balance()</code> read	list-accounts Platform Clearing balance = £0.00 — verified

CLEARING-ACCOUNT GROSS-UP

1,340.00

-

445.90

-

47.10

-

0.00

=

847.00

Gross revenue lands in Platform Clearing, then commission+fees+net payment drain it back to £0.00 — the invariant planner.py refuses to propose without.

How We Built PayoutBridge

one overnight hackathon session — 2026-07-04 00:36 → 2026-07-05 04:54

DAY 1

Research & Specs

00:36 – 18:16 (~18h)

Claude Code

Planning, 8 specs, idea lock, implementation agent throughout

VS Code

Editor for the whole build, all four contributors

DAY 1

Parallel Build

18:37 – 23:27 (~4.8h)

FastAPI

Python backend — parser, planner, Xero execution path

Xero MCP server

@xeroapi/xero-mcp-server via npx — Demo Company writes/reads

Lovable

Generated the React frontend, v1–v3 shipped this window

React / Vite / Bun

TanStack Router UI, run & bundled with Bun

DAY 2

Expansion & Hardening

00:38 – 04:54 (~4.3h)

FastAPI

E1–E6 expansion: refunds, tracking, dashboard, VAT check

Make

7-module automation scenario wired to POST /propose

Pytest

104 tests green — fixed a silent false-verified bug

74

COMMITTS

~28.3h

ELAPSED

4

BUILDERS

104

TESTS PASSING

One repo, one overnight session — research → specs → parallel backend/frontend tracks → expansion & hardening, reconciled directly against the git history.

Official MCP server + raw REST where MCP stops

WRITES

create-invoice · create-bank-transaction
create-payment · create-credit-note
create-contact · create-tracking-category
REST PUT /Invoices/{id}/Attachments
REST PUT /{Endpoint}/{guid}/History

READS

list-accounts (£0.00 verification)
profit-and-loss · trial-balance
balance-sheet · aged-receivables
tax-rates · contacts · bank-transactions
organisation-details (health)

6 scopes: transactions · contacts · settings · reports.read · attachments · offline_access

Custom Connection (client credentials) · Demo Company only · golden path ≤10 calls of the 60/min limit

IMPACT

Books that tell the truth

£493

of hidden turnover restored, per statement

£0.00

clearing balance — proof read live from Xero, every run

< 1 min

upload to verified books.
Manual gross-up: gone

The ask: help us take PayoutBridge from Demo Company to a certified Xero app.

Every marketplace pays out this way. One deterministic pattern covers them all.
